Compressed gaseous fuel measuring systems  
for vehicles.

Part 3: Test report format

Ensembles de mesurage de gaz comprimé pour véhicules.

Partie 3: Format du rapport d'essais

---

## Foreword

The International Organization of Legal Metrology (OIML) is a worldwide, intergovernmental organization whose primary aim is to harmonize the regulations and metrological controls applied by the national metrological services, or related organizations, of its Member States.

The main categories of OIML publications are:

- **International Recommendations (OIML R)**, which are model regulations that establish the metrological characteristics required of certain measuring instruments and which specify methods and equipment for checking their conformity. OIML Member States shall implement these Recommendations to the greatest possible extent;
- **International Documents (OIML D)**, which are informative in nature and which are intended to harmonize and improve work in the field of legal metrology;
- **International Guides (OIML G)**, which are also informative in nature and which are intended to give guidelines for the application of certain requirements to legal metrology; and
- **International Basic Publications (OIML B)**, which define the operating rules of the various OIML structures and systems.

OIML Draft Recommendations, Documents and Guides are developed by Project Groups linked to Technical Committees or Subcommittees which comprise representatives from the Member States. Certain international and regional institutions also participate on a consultation basis. Cooperative agreements have been established between the OIML and certain institutions, such as ISO and the IEC, with the objective of avoiding contradictory requirements. Consequently, manufacturers and users of measuring instruments, test laboratories, etc. may simultaneously apply OIML publications and those of other institutions.

International Recommendations, Documents, Guides and Basic Publications are published in English (E) and translated into French (F) and are subject to periodic revision.

Additionally, the OIML publishes or participates in the publication of **Vocabularies (OIML V)** and periodically commissions legal metrology experts to write **Expert Reports (OIML E)**. Expert Reports are intended to provide information and advice, and are written solely from the viewpoint of their author, without the involvement of a Technical Committee or Subcommittee, nor that of the CIML. Thus, they do not necessarily represent the views of the OIML.

This publication – reference OIML R 139-3, Edition 2015 – was developed by Project Group 4 of OIML TC 8/SC 7 *Gas metering*. It was approved for final publication by the International Committee of Legal Metrology in 2015 and will be submitted to the International Conference on Legal Metrology in 2016 for formal sanction.

OIML Publications may be downloaded from the OIML website in the form of PDF files. Additional information on OIML Publications may be obtained from the Organization's headquarters:

# **Compressed gaseous fuel measuring systems for vehicles**

## **Part 3 – Test report format**

### **1 Introduction**

Implementation of this report format is informative with regard to the implementation of OIML R 139-1 and -2 in national regulations. However, its implementation is mandatory within the framework of the *OIML Certificate System for Measuring Instruments*.

Note concerning the references: All references are to the combined publication OIML R 139-1 and -2:2014. In this report format this publication is referred to as “R 139”.

This report format applies for any kind of compressed gaseous fuel measuring system for vehicles (independent of its technology). It presents a standardized format for recording the results of the various tests and examinations, described in R 139-2:2014, to which a type of a compressed gaseous fuel measuring system for vehicles shall be submitted with a view to its approval based on this OIML Recommendation.

The use of this report format as is, or translated into a different language, is recommended to all metrology services or laboratories evaluating and/or testing types of compressed gaseous fuel measuring systems for vehicles according to OIML R 139, or according to national or regional regulations based on this Recommendation. If a translation is used, it is highly recommended to leave the structure and the clause numbers unchanged, in order to facilitate the interpretation of the contents by those readers who are not familiar with this other language.

The size of the fields should be adjusted as required to accommodate each specific record. Completely deleting an entry field should be avoided.

The report format, in its practical application, shall as a minimum contain clauses A–F (where applicable) in addition to a cover page issued by the Issuing Authority.

### **2 Applicability of this report format**

In the framework of the *OIML Certificate System for Measuring Instruments* applicable to compressed gaseous fuel measuring systems for vehicles in conformity with R 139:2014, the use of this report format is mandatory. It shall be made available in English and/or in French and include copies translated into the national languages of the countries issuing such certificates, when appropriate. Concerning the implementation of OIML R 139:2014 in national regulations, this report format is informative.

### 3 Guidance for the application of this report format

Key to the symbols and expressions used on the following pages:

*The “summary of the results” and the “results of the tests” shall be completed according to the following example:*

| Clause | Requirement or test | Yes | No | N.A. | Meaning                                                  |
|--------|---------------------|-----|----|------|----------------------------------------------------------|
| #      | <name>              | X   |    |      | Passed                                                   |
| #      | <name>              |     | X  |      | Failed                                                   |
| #      | <name>              |     |    | X    | Requirement or test is not applicable to this instrument |

- Notes:*
- (1) Unless prescribed otherwise, “Date” in the report refers to the date of testing.
  - (2) The name(s) or symbol(s) of the unit(s) used to express the test results shall be specified in each form.
  - (3) Where in a table one or several choices can be made, checkboxes are applied.  
In such a case, some or all of the columns Y, N, N/A are not applicable and are thus presented grayed out or crosshatched (see the example below).

| Clause | Description | Yes                      | No | Not applicable | Observations |
|--------|-------------|--------------------------|----|----------------|--------------|
|        |             |                          |    |                |              |
|        |             | <input type="checkbox"/> |    |                |              |
|        |             | <input type="checkbox"/> |    |                |              |

If a prescribed test is not relevant for the type of instrument to be tested, the reason why the test is omitted shall be clearly stated in the field “Observations” (for instance surge tests on signal lines shorter than 30 m, tests related to AC mains supply in the case of an instrument only powered by DC mains supply, or partial testing after modification of a previously tested type).

The number of the report and the page numbers shall be completed in the heading.

**Pages 1–5 of this test report format may be replaced by a cover page by the Issuing authority.**

### 4 The evaluation report

The format for the report is presented on the following pages, starting with space for the cover page.

**Cover page**  
**by the**  
**Issuing Authority**  
in accordance with national custom or legislation

| <p>Examples are:</p> <p>Data printer (if applicable); ancillary devices, cabling and other accessories:</p> |  |

**D.6 Selection of specimens tested**

|                                                                                                                                                                                                    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>If the tests and examinations are valid for more versions, present full details of these versions, according to the listing of parameters and type designation in the way presented in D.4:</p> |
| <p>Justification of the selection of the specimens:</p>                                                                                                                                            |

The following specimens have taken part in the examination:

| Specimen no. | Model | Serial no. | Year of manufacture | $Q_{\max}$<br>[kg/min] | $Q_{\min}$<br>[kg/min] |
|--------------|-------|------------|---------------------|------------------------|------------------------|
| 1            |       |            |                     |                        |                        |
| 2            |       |            |                     |                        |                        |
| 3            |       |            |                     |                        |                        |
| 4            |       |            |                     |                        |                        |
| 5            |       |            |                     |                        |                        |
| ...          |       |            |                     |                        |                        |

**D.7 Adjustments and modifications**

Adjustments, modifications, and repairs made to the specimens during the testing:

**D.8 Additional information concerning the type**

Additional observations and/or information (connection equipment, interfaces, etc.):

**D.9 Documentation supplied by the applicant**

Observations:

**D.10 Results of previous tests that were taken into account**

Details:

**D.11 Information concerning the test equipment used for the type evaluation**  
(including details of simulations)

*If applicable, the laboratory is free to provide this information, instead of a complete overview here, in the appropriate chapter F.x in an extra field below the first table (with “Date & Time” etc.).  
In that case a statement shall be made in this field.*

**E Examinations***(To be completed by the Evaluating Authority)**Where specified “not applicable” in Table C.1, the related tables below may be omitted from this report.*

For each of the applicable requirements an explanation of the manner in which the requirement is met is presented in the column ‘observations’.

| OIML<br>R 139-1<br>Subclause | Description | Yes | No | Not applicable | Observer's name: |

|                              | The identification is inextricably linked to the software                                                                                                                              |     |    |                |                       |
| A.1.2                        | <b>Correctness of algorithms and functions</b>                                                                                                                                         |     |    |                |                       |
|                              | The measuring algorithms and functions are appropriate and functionally correct                                                                                                        |     |    |                |                       |
| A.1.3                        | <b>Software protection (against fraud)</b>                                                                                                                                             |     |    |                |                       |
|                              | The legally relevant software is protected against unauthorized modification, loading or changes by swapping the memory device                                                         |     |    |                |                       |
|                              | Only clearly documented functions can be activated by the user interface, which do not facilitate fraudulent use                                                                       |     |    |                |                       |
|                              | Parameters that fix the legally relevant characteristics are secured against unauthorized modification                                                                                 |     |    |                |                       |
|                              | Displaying the current parameter settings is possible                                                                                                                                  |     |    |                |                       |
|                              | Protection/sealing makes unauthorized access impossible or evident                                                                                                                     |     |    |                |                       |
| A.1.4                        | Detection by checking facilities of significant faults is performed by the software and in the legally relevant software part                                                          |     |    |                |                       |
|                              | A list is available of anomalies which result in a significant fault and which are detected by the software                                                                            |     |    |                |                       |
| A.2.1                        | <b>Separation of electronic devices and sub-assemblies</b>                                                                                                                             |     |    |                |                       |
|                              | Constituents of a measuring system that perform functions which are legally relevant are identified, clearly defined, and documented                                                   |     |    |                |                       |
|                              | Those functions cannot be inadmissibly influenced by commands received via an interface                                                                                                |     |    |                |                       |
|                              | All legally relevant software parts are clearly described                                                                                                                              |     |    |                |                       |
|                              | An interface is available between the legally relevant software and the other software parts, and is clearly documented. All communication is performed exclusively via this interface |     |    |                |                       |
|                              | The interface commands are documented with a statement of completeness                                                                                                                 |     |    |                |                       |
|                              | The legally relevant software has priority using the resources over non-relevant software. The measurement task is not delayed or blocked by other tasks                               |     |    |                |                       |
| A.2.2                        | <b>Shared indications</b>                                                                                                                                                              |     |    |                |                       |
|                              | The same display is used for presenting information both from the legally relevant part and the non-legally relevant part                                                              |     |    |                |                       |
|                              | Software for the indication of measurement results belongs to the legally relevant part                                                                                                |     |    |                |                       |
| A.2.3                        | <b>Storage of data, transmission via communication system</b>                                                                                                                          |     |    |                |                       |
|                              | The measurement value stored or transmitted is accompanied by all relevant information for future legally relevant use                                                                 |     |    |                |                       |
|                              | The data is protected to guarantee the authenticity, integrity and correctness concerning the time of measurement                                                                      |     |    |                |                       |
|                              | The memory device is fitted with a checking facility, which guarantees that irregular data is discarded or marked unusable                                                             |     |    |                |                       |
|                              | The software module that prepares the data for storing, sending and checking after reading or receiving is part of the legally relevant software                                       |     |    |                |                       |

|       |                                                                                                                                                                                                                                                                                           |  |  |  |  |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|
|       | Cryptographic methods are applied. Confidentiality key-codes are kept secret and secured                                                                                                                                                                                                  |  |  |  |  |
| A.2.4 | The measurement is not inadmissibly influenced by a transmission delay                                                                                                                                                                                                                    |  |  |  |  |
| A.2.5 | No measurement data is lost if the network services become unavailable                                                                                                                                                                                                                    |  |  |  |  |
| A.2.6 | Data storage is performed automatically                                                                                                                                                                                                                                                   |  |  |  |  |
|       | The storage device has sufficient permanency to ensure that the data is not corrupted under normal storage conditions                                                                                                                                                                     |  |  |  |  |
|       | There is sufficient memory storage                                                                                                                                                                                                                                                        |  |  |  |  |
|       | All data necessary for the calculation is stored with the final calculated value                                                                                                                                                                                                          |  |  |  |  |
| A.2.7 | Stored data is deleted when the transaction is settled under the following conditions: <ul style="list-style-type: none"><li>• deletion is performed in the same order as the recording order;</li><li>• deletion is started automatically or after a specific manual operation</li></ul> |  |  |  |  |
